

Echolocation For The Blind

Echolocation For The Blind

Human echolocation is the ability of humans to detect objects in their environment by sensing echoes from those objects, by actively creating sounds: for example, by tapping their canes, lightly stomping their foot, snapping their fingers, or making clicking noises with their mouths. People trained to orient by echolocation can interpret the sound waves reflected by nearby objects, accurately ...

Human echolocation - Wikipedia

Daniel Kish is the lead founder and President of World Access for the Blind.. Daniel Kish (born 1966 in Montebello, California) is an American expert in human echolocation and the President of World Access for the Blind (WAFTB), a California-registered nonprofit organization founded by Kish in 2000 to facilitate "the self-directed achievement of people with all forms of blindness" and increase public awareness about their strengths and capabilities.

Daniel Kish - Wikipedia

Some blind people have learned to use echolocation to find their way around. That is, they produce a sound and wait for it to bounce off obstacles and echo back to them. With the returning echo, they can detect the size and location of obstacles and carefully avoid them.

10 Fascinating Things Blind People See - Listverse

The saying "blind as a bat", simply isn't correct. The truth is that all 1,100 bat species can see and often their vision is pretty good, although not as excellent as many other night-hunting animals. There are two main groups of bats, which are believed to have evolved independently of each ...

Bats Are Not Blind - Today I Found Out

ECHOLOCATION Bats send out sound waves using their mouth or nose. When the sound hits an object an echo comes back. The bat can identify an object by the sound of the echo.
