To clarify the effect of additives on membrane morphology and battery performance, a series of spongy-like PEI membranes with different pore size were constructed using phase inversion method by introducing different content of PVP in the casting solution (), the PVP inside prepared membranes was removed by immersed in water for 24 h. With the increase amount of PVP, the pores of obtained ...

Ion-exchange membranes have been used in various industrial processes, e.g., in the electro-dialytic concentration of seawater to produce edible salt, as a separator for electrolysis, in the desalination of saline water by electro-dialysis, in the separation of ionic materials from non-ionic materials by electro-dialysis, in the recovery of acid and alkali from waste acid and alkali solution by ...

It's colourless, odourless, the most abundant element in the universe, and may one day take you from 0-100 on the highway. It seems as though hydrogen is a pretty logical choice for clean fuel of the future. The kicker is that there's very little pure hydrogen to be found anywhere on Earth ...

Fuels made from living biomass rather than organisms fossilised some 200 million years ago have attracted worldwide attention - and suspicion. While development continues apace, first and second generation fuels based on terrestrial plants are controversial because they require

cultivation resources that could otherwise be used for growing food.

The current National Renewable Fuel Standard program (RFS1) was established under the Energy Policy Act of 2005, which amended the Clean Air Act by establishing the first national renewable fuel standard. The U.S. Congress gave the U.S. Environmental Protection Agency (EPA) the responsibility to coordinate with the U.S. Department of Energy, the U.S. Department of Agriculture, and stakeholders ...

Power-to-gas (often abbreviated P2G) is a technology that converts electrical power to a gas fuel. When using surplus power from wind generation, the concept is sometimes called windgas. There are currently three methods in use; all use electricity to split water into hydrogen and oxygen by means of electrolysis. [citation needed] In the first method, the resulting hydrogen is injected into the ...

Agenda. Innovations for Noble and Impactful Goals: The Best is Yet to Come. Welcome to our 15th Cleantech Forum Europe, our Crystal Anniversary! In February 2019, one of Europe's leading next-generation energy companies, sonnen, was acquired by Shell – an event I recently likened to “our Netscape moment.” In 2014, the company, known then as sonnenbatterie, made our Global Cleantech 100 ...

Changes in the politics and technology of energy mean that the idea of a hydrogen economy might be about to make its mark in a number of practical arenas. It might be thought that as the hype of the last decade has declined, the idea of a hydrogen economy is once again on technology's back-burner.

Other innovators are also exploring the possibilities of renewable energy, as one of the biggest handicaps for traditional desalination is its huge consumption of fossil fuels.
