ATS' chemists perform FTIR analysis of polymers by subjecting test samples to infrared waves using an FTIR spectrometer. Each polymer displays distinct tendencies when exposed to infrared waves at a range of frequencies, absorbing some and transmitting some to an infrared detector in the machine.

Manufacturers test the polymers they use in their products for any variety of reasons. Whether testing is needed to address a quality control concern, ensure regulation compliance, promote safety performance, conduct preventative maintenance, carry out a failure analysis, or determine the material's identity, Applied Technical Services' polymer laboratories can supply clients with the

to Practical Copolymer Analysis using GPC/SEC and Related Techniques, sponsored by PSS Polymer Standards Service GmbH, experts discuss some of the challenges inherent in analyzing copolymers with different compositions and molar masses. Readers will learn how several GPC/SEC methods may improve copolymer sample characterization.
