Many aquaponic gardeners have pointed out that we need some basic "Aquaponic Gardening Rules of Thumb" for DIY aquaponics. Why? Because the beginners among us could use some help with "Aquaponics How-To" without spending weeks researching what to do. I've had the distinct honor of ...

Air conditioner sizing rules of thumb must die. That's what I wrote in my last article. The most common rule of thumb is to use 500 square feet per ton to determine the size of air conditioner needed.

Water piping has more common options. I almost never see galvanized iron pipe installed anymore, though it was common years ago. Both cost and problems with long term corrosion and maintenance have forced the decline.

Therefore, if you're building a school, just remember that every 1,000 sf will need about 4 tons of air conditioning. Of course, you need to remember that this rough sizing varies by the amount of insulation, the amount and orientation of glazing, the amount of exterior wall and the climate.

Rule: Mechanical type anchors should not be set a minimum of 5 anchor diameters from an unsupported edge. Explanation: If set too close to an unsupported edge, the outward pressure of the concrete anchor will decrease the holding value of the anchor or make it non-existent. This is also known as a "blowout" of the base material.

The Design of Everyday Things By Donald Norman "Every mechanical engineer should have a copy of Don Norman's terrific book, The Design of Everyday Things. This book is a classic. It's been through several editions, yet each time I read it I come away with insights that are new, fresh, and important.

The Boat. The Viking longboat, along with a related design called the "knarr" for shipping cargo, is a

true engineering marvel of the ancient world, and in light of the fact that modern replicas have been apocryphally clocked at 25 knots, these boats are a marvel to this very day, over a millennium later. "First of all, they [longboats] had very shallow drafts, so they could sail in very ...

The thought process of selecting a logical choice from the available options.. When trying to make a good decision, a person must weight the positives and negatives of each option, and consider all the alternatives. For effective decision making, a person must be able to forecast the outcome of each option as well, and based on all these items, determine which option is the best for that ...

Electric Current. Electric current is the rate of charge flow past a given point in an electric circuit, measured in Coulombs/second which is named Amperes. In most DC electric circuits, it can be assumed that the resistance to current flow is a constant so that the current in the circuit is related to voltage and resistance by Ohm's law. The standard abbreviations for the units are $1 \text{ A} = 1 \text{ C/s}$.

The National Kitchen & Bath Association developed these Bathroom Planning Guidelines to provide designers with good planning practices that consider typical needs of users. A committee of experts in bathroom design reviewed relevant research, lifestyle and design trends, and Model Building Code requirements to assure the updated guidelines promote the health, safety, and welfare of consumers.
